Benefits of automating workflows

Benefits of Group Based Access Control

Simplified Management

Managing access rights becomes easier by defining permissions for groups. This saves time and minimizes errors.

1

Consistency

All users within a group have uniform access rights, eliminating confusion and reducing risk. Team members have identical access to tools.

2

Scalability

GBAC simplifies bulk user management through groups, remaining efficient for multiple users. New groups can be created to reflect evolving roles.

3

Flexibility

Access rights can be tailored based on roles, responsibilities, or specific tasks. Targeted access minimizes exposure to sensitive information.

4

Manage Microsoft 365 User Role Changes with **Lifecycle Workflows**
